

# RYO Optodist

- 1 Manual gain control (sets either amplification/attenuation, vca initial level and/or overdrive gain).
- 2 Gain LED (indicates gain or vca initial lvl).
- 3 Signal In Knob sets audio input level.
- 4 Gain CV Knob - attenuator for gain control cv input.
- 5 LED based limiter circuit (limits the signal thru a set of 4 LEDs).
- 6 CV Input (attenuator - gain cv) either opens VCA or increases distortion.
- 7 Limiter on/off switch - engaging the LED clipping will alter character of the distortion.
- 8 Audio Input.
- 9 Audio Output.

Width: 6hp
